# GARRISON

Cross-Domain Solutions for Government

Mission enablement, efficiency and security through CDS technology

The Garrison SAVI® Isolation Platform provides Cross-Domain Access Solutions (CDS) for users of classified systems, and provides Ultra-secure Remote Browser Isolation for users in unclassified environments. Through unique and unparalleled hardware enforced security, Garrison is helping our Government customers transform their digital infrastructures, enable collaboration, real-time situational awareness and reduce costs by truly delivering on the promise of multi-domain system access.

Capabilities

Garrison's technology offers three core capabilities:

Browser isolation, providing access to HTTP(S) sites

VDI isolation, providing access to VDI platforms

Isolated system/network management

CDS Use Cases

These capabilities allow Garrison to support a wide range of CDS Access use cases:

- Access the web from secure environments
- Secure access to collaborative workspaces
- Secure remote working
- Browse down/across from classified domains
- Network management including management of 3rd party CDS solutions

Multiple domains and use-case elements can be combined to create a single-pane-of-glass intelligence desktop with real-time access to critical information sources.

Remote Browser Isolation

Outside of traditional CDS use-cases, Garrison is also powering enterprise-wide secure webaccess (Remote Browser Isolation), protecting all users from phishing attacks and internet borne malware. The enterprise is secured, users can click on links and access the web in confidence, enabled to do their jobs. Scaled for millions of users, either through on-premise appliances or our hardsec enabled Garrison ULTRA® cloud service. Ultra-secure remote browsing delivers security for trusted, strategic digital transformation.

Technology

Garrison's innovation is unique. Security is enforced through a combination of patented Garrison SAVI® and hardsec technology. This technology ensures that our customers' benefit from unparalleled levels of security, whilst avoiding compromise on performance, scale and cost.
